

Brainstorm & idea prioritization

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

- 10 minutes to prepare
- 1 hour to collaborate
- 2-8 people recommended

Share template feedback

Before you collaborate

A little bit of preparation goes a long way with this session. Here's what you need to do to get going.

10 minutes

Team gathering
Define who should participate in the session and send an invite. Share relevant information or pre-work ahead.

Set the goal
Think about the problem you'll be focusing on solving in the brainstorming session.

Learn how to use the facilitation tools
Use the Facilitation Superpowers to run a happy and productive session.

Open article

Define your problem statement

What problem are you trying to solve? Frame your problem as a How Might We statement. This will be the focus of your brainstorm.

5 minutes

PROBLEM
How might we [your problem statement]?

Key rules of brainstorming

To run a smooth and productive session

- Stay in topic.
- Defer judgment.
- Go for volume.
- Encourage wild ideas.
- Listen to others.
- If possible, be visual.

Brainstorm

Write down any ideas that come to mind that address your problem statement.

10 minutes

CNN model is used to extract flood images from raw images and color filters are used to refine the desired detection.

Naturally occurring events that cause problems to environment.

To reduce the effects, a webpage is designed.

Huge amount of dataset is needed for training.

AI can predict four types of natural disasters, including: Earthquakes.

Natural disasters affect the ecosystem.

Detect and classify the type of disaster with high accuracy rate.

Disasters like earthquake, flood, wildfire are classify using this model.

Live image data are taken for classification.

The forecasting of extreme events and the development of hazard maps to the detection.

Live Images can be captured using webcam and then tested.

To carry out disaster analysis, twitter were used, where people share their views.

Deep Learning techniques have been applied.

A natural disaster can causes loss of life and property.

Large images are needed for better accuracy.

With the help of neural network, it is possible to predict flood and save masses from disaster.

TIP
You can select a sticky note and hit the pencil (switch to sketch) icon to start drawing!

AI can help response teams understand natural hazards, monitor events in real time.

Many lives have been affected due to the natural disaster.

Developed using deep learning techniques like multilayered deep convolutional neural network.

A model to predict cyclone, earthquake, wildfire, flood has been proposed.

To Classify the natural disasters.

It classifies the natural disaster based on the image.

AI to detect extreme events such as earthquakes.

The proposed system's efficiency and accuracy were tested on several datasets and it outperformed other methods to give the highest results.

Work with open CV.

Necessary for the earlier classification.

Classifies based on image.

In particular (ML is playing an increasingly important role in disaster risk reduction.

CNN-based simple feature extraction with a decision single decomposition (CNN-based) proposed approach helps develop a real time fire monitoring system.

Image data needed for classification.

Enormous data is needed for the image data.

People emotions on their beloved families who lost their lives.

Group ideas

Take turns sharing your ideas while clustering similar or related notes as you go. Once all sticky notes have been grouped, give each cluster a sentence-like label. If a cluster is bigger than six sticky notes, try and see if you and break it up into smaller sub-groups.

20 minutes

TIP
Add customizable tags to sticky notes to make it easier to find, browse, organize, and categorize important ideas as themes within your mural.

Technical Aspects

Create a user friendly GUI that helps classify the natural disaster.

A large dataset is needed for the accurate model.

Social Impacts

Earlier precaution measures.

Reduce the loss of life.

Availability of Resources

Image data needed for classification.

Enormous data is needed for the image data.

People Emotions

People emotions on drastic disasters

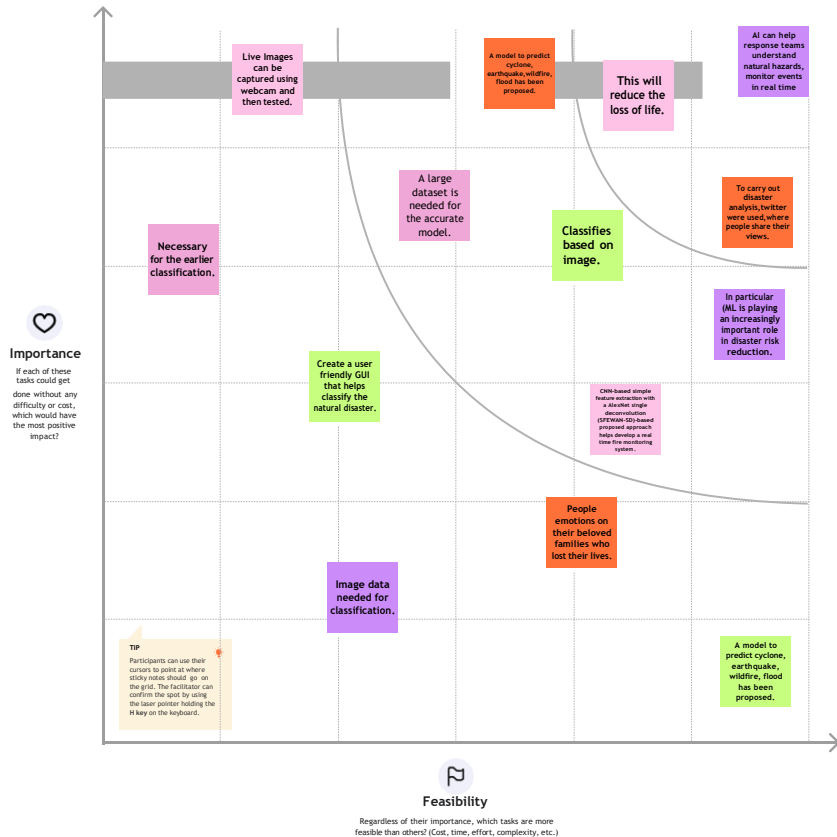

People emotions on their beloved families who lost their lives.

Prioritize

Your team should all be on the same page about what's important moving forward. Place your ideas on this grid to determine which ideas are important and which are feasible.

20 minutes

After you collaborate

You can export the mural as an image or pdf to share with members of your company who might find it helpful.

Quick add-ons

- Share the mural**
Share a view link to the mural with stakeholders to keep them in the loop about the outcomes of the session.
- Export the mural**
Export a copy of the mural as a PNG or PDF to attach to emails, include in slides, or save in your drive.

Keep moving forward

- Strategy blueprint**
Define the components of a new idea or strategy.
[Open the template](#)
- Customer experience journey map**
Understand customer needs, motivations, and obstacles for an experience.
[Open the template](#)
- Strengths, weaknesses, opportunities & threats**
Identify strengths, weaknesses, opportunities, and threats (SWOT) to develop a plan.
